GROWN BY
EDGAR W. DARLING
1311 PURCHASE ST. - - NEW BEDFORD, MASS.

TO MY PATRONS

It is with great pleasure that I am presenting this catalogue to my customers and friends. I have endeavored to offer you only the very best that can be obtained of this wonderful and popular autumn flower. I have specialized with the latest California novelties, also with the famous "Judge Marean" creations, and many of our own fine New England Seedlings. The improvement of the Dahlia has been so great that it bids fair to become the most popular flower in cultivation. A great many of these varieties listed in this catalogue are the ones that enabled me to win so many prizes at the recent shows. I wish to take this opportunity to thank you for the very fine orders I received this fall, and assure you they will have my best attention.

EDGAR W. DARLING.

Terms—Prices quoted are (unless otherwise stated) for field grown tubers, post paid. Cash must accompany all orders, or in advance of shipment. I start shipping in April, and orders are filled in rotation as received.

As the demand for some of the finer sorts often exceeds the supply, it will be well to order early, and so avoid disappointment. I guarantee the tubers I send out true to name, and to arrive in good growing condition, but cannot guarantee them to live and thrive. They should be returned upon delivery if not satisfactory.

CULTURE OF DAHLIAS

The dahlia is one of the easiest of all flowers to cultivate and will produce more flowers than any other plant grown, flowering all summer and fall if the simple cultural directions are followed closely. They can be grown in any good garden soil, but if possible plant in an open, sunny situation. Prepare the soil thoroughly by digging 12 to 18 inches deep in the fall, if possible, and again in the spring. Plant any time between April 30th and June 1st, digging holes six inches deep and from three to four feet apart. Then lay in the tuber flat on its side, the size of which makes no difference as long as it has

one strong eye or sprout. Cover three inches deep, thus leaving the hole one-half full, to be filled after plant comes up 6 to 8 inches above the ground.

As soon as the plant is large enough, cut out the top of it just above the second or third set of leaves, which causes the plant to grow a stout branch at the base of each of the four or six leaves left. Just as soon as the plants are up, the most important thing to do is to keep the soil loose and mellow by hoeing or cultivating once or twice a week and just as soon after each rain as the soil will permit. As soon as the buds appear stop all cultivation and give the bed a mulch of rotted manure, leaves, etc. Water the beds and plants thoroughly once or twice a week and specially during the dry weather. Tie each plant to a strong stake so it may have a strong support. To have the greatest success is to keep them growing as strong and sturdy as possible. Never allow the faded flowers to remain on the plant but cut them off with as much stem or stalk as you can. To have larger blooms it is necessary to disbud, leaving the center bud and taking off the side ones, leaving a stem approximately eighteen inches long. Dahlias will continue to bloom until a heavy frost kills the tops in late fall, after which the tops are cut off and the roots are dug and stored in a frost proof cellar or basement, covering with dry soil, sand or anything that will keep them from shriveling. Divide in the spring after the eyes begin to show.
